

Appendix for: What Have We Learned About Gender From Candidate Choice Experiments? A Meta-analysis of 42 Factorial Survey Experiments

Susanne Schwarz and Alexander Coppock*

August 13, 2019

A Study-by-study CATEs by other candidate attributes

In this section, we show the effects of gender, conditional on the *other* candidate characteristics, separately by study. These estimates are shown as Figure 2 in the main text, but here we can expand the graphs in order to label each point clearly. The main takeaway from these graphs is that the effect of gender mostly does not depend on the level of the other candidate characteristics.
