Errata

On Coppock (2021), "Visualize as You Randomize," chapter 17 of *Advances in Experimental Political Science*

The maintained replication code behind these errata is at https://github.com/active-maintenance-aec/coppock_2021 and is archived at Zenodo at https://doi.org/10.5281/zenodo.24168314, a DOI that always resolves to the latest version.

This note lists sixteen corrections to "Visualize as You Randomize: Design-Based Statistical Graphs for Randomized Experiments," chapter 17 of *Advances in Experimental Political Science* (Druckman and Green, eds., Cambridge University Press, 2021, pp. 320–336), doi 10.1017/9781108777919.022. **None of them changes a conclusion of the chapter**, which is a methodological argument about how to draw statistical graphs for randomized experiments and does not rest on any quantity below. Three are sentences that misdescribe the simulated data behind a figure, and one is a vertical axis label that misdescribes the outcome it plots. The rest are smaller: two typos in the text, a garbled subcaption, and nine errors in the reference list. Every figure in the chapter is correct as printed, and none is reprinted here.

All the data in the chapter are simulated, and the deposited datasets (10.7910/DVN/VE6VSR) are what the figures are drawn from. Every number in a corrected sentence and in the notes below is computed from those datasets at the time this document is rendered. Bold marks what has changed. The code and output supporting each correction are in the actively maintained replication repository for this chapter, `active-maintenance-aec/coppock_2021`.

1. The two neighborhoods are transposed in the discussion of Figure 17.3

> In Figure 17.3a, we facet by block. Within each facet, the groups that are compared are formed by random assignment: we see small effects of treatment in neighborhood **1** and large negative effects of treatment in neighborhood **2**.

Corrected:

> In Figure 17.3a, we facet by block. Within each facet, the groups that are compared are formed by random assignment: we see small effects of treatment in neighborhood **2** and large negative effects of treatment in neighborhood **1**.

The large negative effect is in neighborhood 1, where the treated mean is 6.16 against a control mean of 10.52, an effect of –4.36. In neighborhood 2 the effect is 0.25. Figure 17.3 itself is right: its left facet is labelled "Neighborhood 1" and shows the drop, and the deposited data generator writes the effect as `-4 * Z * (neighborhood == 1)`. Only the sentence describing the figure is wrong.

2. The clustered outcome is not confined to the scale the chapter states

> In this example, we imagine a "test-prep" treatment that is randomly assigned to some classrooms but not to others; the outcome is measured on a **400**–**1600**-point scale.

Corrected:

> In this example, we imagine a "test-prep" treatment that is randomly assigned to some classrooms but not to others; the outcome is measured on a **217**–**1720**-point scale.

The example intends the SAT scale, and the deposited generator does not enforce it: it draws a classroom shock and a student shock from unbounded normal distributions, so 8 of the 441 simulated students score outside 400 to 1600. Both panels of Figure 17.4 set their limits at 400 and 1600, so those students are clipped out of the published figure and a reader cannot see them. The clipping changes only what is drawn: the classroom means and their intervals are computed from all 441 students before plotting, and `coord_cartesian()` zooms the axis without dropping any data, so no plotted estimate moves. The clipping is the chapter's own choice about the figure; what is wrong is the sentence's claim about the data.

3. Figure 17.3b compares neighborhoods, not schools

> By contrast, in Figure 17.3b, we facet by randomly assigned group, so we compare across **schools** and within treatment group.

Corrected:

> By contrast, in Figure 17.3b, we facet by randomly assigned group, so we compare across **neighborhoods** and within treatment group.

The blocked example has 2 neighborhoods, of 50 and 100 residents, and the horizontal axis of the published Figure 17.3b is labelled "Neighborhood 1" and "Neighborhood 2". There are no schools in this design. The chapter's classroom example is the cluster-randomized experiment of Figure 17.4, two sections later.

4. The vertical axis of Figure 17.5 misdescribes the raw outcome scale

The vertical axis of Figure 17.5 is labelled:

> Outcome variable **(raw scale is 7-point Likert)**

Corrected:

> Outcome variable **(raw scale is continuous, 0.6–8.7)**

The outcome plotted in the unadjusted facet takes 100 distinct values across 100 units, running from 0.6 to 8.7, and 5 of them fall outside the 1 to 7 range a seven-point item allows. The generator draws the outcome as `Y ~ 0.5 * Z + 1.0 * X + 0.5 * Z * X + U` with a normal covariate and normal disturbance, so nothing about it is an ordinal item; the facet's own axis runs from 0 to 10. The chapter's only Likert outcome is the attrition example in Figure 17.8, which is genuinely seven-point. The deposited script writes this label, so the chapter printed what its own code gave it. Nothing plotted in Figure 17.5 changes, and the figure is not reprinted: the correction is to the axis title alone.

5. The subcaption of Figure 17.4a is missing a space and does not say what sets the point size

> Cluster means are **plotted,with** point size proportional to **size**

Corrected:

> Cluster means are **plotted, with** point size proportional to **cluster size**

Each point in Figure 17.4a is a classroom's mean, drawn in proportion to the number of students in that classroom.

6. A doubled "from"

> a population other than the one from which **from** the sample was drawn

Corrected:

> a population other than the one from which the sample was drawn

7. "Simply" for "simple"

> they rely on a relatively **simply** logic

Corrected:

> they rely on a relatively **simple** logic

8. Sarah Khan's surname is misspelled, in the text and in the reference list

See, for example, **Kahn** (2017)

Kahn, Sarah. 2017.

Corrected:

See, for example, **Khan** (2017)

Khan, Sarah. 2017.

The author is Sarah Khan (PhD, Columbia University; now at Yale University), who presented the paper under the title cited. It is unpublished and has no DOI.

9. Bullock and Ha (2011) is given the wrong pages

Cambridge University Press, **p. 959**.

Corrected:

Cambridge University Press, **pp. 508–522**.

Crossref, doi 10.1017/CBO9780511921452.035: the chapter runs from p. 508 to p. 522.

10. Both publishers of Bertin (1967) are misspelled

Editions **Gauthier-Villar**.

Reissued in 2010, **Ersi Press**.

Corrected:

Editions **Gauthier-Villars**.

Reissued in 2010, **Esri Press**.

The first edition was published in Paris by Mouton and Gauthier-Villars, and the English translation was reissued by Esri Press (Redlands, CA).

11. Lupi and Posavec (2016) is given the wrong publisher

Dear Data. **San Francisco, CA: Chronicle Books**.

Corrected:

Dear Data. **New York: Princeton Architectural Press**.

Dear Data was published in the United States by Princeton Architectural Press, and in the United Kingdom by Particular Books.

12. W. E. B. Du Bois Center (2018) is given the wrong publisher and loses the initials' full stops

2018. **WEB Du Bois's** Data Portraits: Visualizing Black America. **San Francisco, CA: Chronicle Books**.

Corrected:

2018. **W. E. B. Du Bois's** Data Portraits: Visualizing Black America. **New York: Princeton Architectural Press**.

The book was published by Princeton Architectural Press in 2018, edited by Whitney Battle-Baptiste and Britt Rusert for the W. E. B. Du Bois Center at the University of Massachusetts Amherst.

13. Wilkinson's Grammar of Graphics is given the wrong year and place of publication

(Wilkinson **2006**)

Wilkinson, Leland. **2006**. The Grammar of Graphics. **Berlin: Springer Science+Business Media**.

Corrected:

(Wilkinson **2005**)

Wilkinson, Leland. **2005**. The Grammar of Graphics. **New York: Springer**.

Crossref, doi 10.1007/0-387-28695-0: the second edition, Springer New York, 2005.

14. Wickham (2016) is given the wrong place of publication

Data Analysis. **Berlin: Springer**.

Corrected:

Data Analysis. **Cham: Springer International Publishing**.

Crossref, doi 10.1007/978-3-319-24277-4: Springer International Publishing, Cham.

15. Chambers et al. (1983) is given the wrong place and imprint

Boston, MA: Wadsworth.

Corrected:

Belmont, CA: Wadsworth International Group.

The 1983 edition was published by Wadsworth International Group in Belmont, California (and by Duxbury Press in Boston).

16. Titiunik's given name loses its accent

and **Rocio** Titiunik

Corrected:

and **Rocío** Titiunik

Crossref, doi 10.1017/S0003055416000575.
